

NMEA2000® Fresh Water Level Sender

- Output remaining water Volume or Level
- High $\pm 2\%$ Accuracy
- Proven Reliability - Over 10,000 installed
- Tank depths from 185mm to 2 metres
- Up to 16 water senders on a single network
- Easy to Install
- Robust Stainless Steel Construction
- NMEA2000 network standard
- Single micro plug to NMEA2000
- No ultrasonic “dead band” at top of tank

The 3281 Water Level Sender will measure the water level in the fresh water tanks. They provide a $\pm 2\%$ accurate tank level to the NMEA2000® marine network.

They are robustly constructed in stainless steel with no moving parts to stick or fail in service. They are easily cut to length to suit tank depths from 250mm to 2 metres.

They are easily fitted in the tank using a single 1.25” BSP threaded hole or into the standard SAE 5 bolt fitting by using the SAE 5 Bolt to 1.25” Sender Mounting Ring adaptor (optional).

Up to 16 senders can be connected to a single network and the tank number is simply selectable at installation by means of the small rotary switch.

It is manufactured to the NMEA2000® network standard and attaches to the network using a single “Micro” plug. It draws less than 50mA from the network.
